**DIGITAL LITERACY PROJECT
REPORT**

NAME: Purvi Gupta

REG NO: 25BAS10040

**BRANCH: Aerospace
Engineering**

YEAR: 1st Year

COURSE CODE: CSE0001

Date: 26 MARCH,2026

Introduction

This project was undertaken as part of the Digital Literacy course to understand the importance of digital tools and responsible online behavior. In today's world, digital literacy is essential for students to communicate effectively, maintain a professional online presence, and stay safe from cyber threats.

The project includes five different tasks that focus on various aspects such as creating digital content, building online profiles, exploring platforms, practicing email etiquette, and understanding cybercrime. Each task helped me gain practical knowledge and improve my confidence in using digital tools.

Overall, this project provided valuable insights into how students can use technology effectively while being responsible and aware in the digital environment.

Task 1

For Task 1, I created a digital literacy awareness infographic using Canva. The infographic focused on key topics such as the importance

of digital literacy, safe internet practices, and maintaining a professional online presence. I chose Canva because it is easy to use and provides a variety of templates and design elements.

While designing the infographic, I tried to keep the content simple, clear, and visually appealing so that it can be easily understood by students. I included icons, headings, and short points to make the information more engaging.

One challenge I faced was selecting the most important points and arranging them in a limited space. However, this helped me improve my ability to present information in a concise manner. Overall, this task helped me understand how visual communication can be used effectively to spread awareness about digital literacy.

Task 2

In Task 2, I created and updated my profiles on platforms like GitHub, LinkedIn, and Kaggle. These platforms are important for building a professional online presence and showcasing skills. On GitHub, I created a profile README to introduce myself and my interests. On LinkedIn, I added my education details, including my degree and institution.

These platforms serve different purposes. GitHub is useful for sharing projects and coding work, LinkedIn helps in networking and professional growth, and Kaggle is useful for practicing data-related skills.

In the future, I plan to regularly update my profiles by adding projects, skills, and achievements. This will help me build a strong digital identity and improve my chances of getting internships and job opportunities. This task helped me realize the importance of maintaining a professional presence online from the beginning of my career.

Task 3

For Task 3, I explored coding and collaboration platforms. I created an account on a coding platform and completed a beginner-level problem, which helped me understand the basics of problem-solving and logical thinking.

Additionally, I created a Google Form as a digital literacy awareness quiz. The form included five questions, including both multiple-choice and short-answer types. This activity helped me learn how to collect responses and analyze them using Google Sheets.

This task was useful because it introduced me to tools that are important for academic and professional purposes. Coding platforms help in improving technical skills, while collaboration tools like Google Forms are useful for surveys, feedback, and teamwork.

Overall, this task improved my confidence in using online tools and showed me how technology can be used effectively for learning and collaboration.

Task 4

In Task 4, I learned about professional communication and email etiquette. I wrote two formal emails — one requesting an assignment extension and another expressing interest in an internship opportunity. I focused on maintaining a proper structure, polite tone, and clear subject lines.

I also created a checklist of do's and don'ts for social media usage. This helped me understand how online behaviour can impact a person's image and reputation.

A situation where poor communication can cause problems is when a student sends an informal or unclear email to a professor. This can create misunderstanding or leave a negative impression. Such situations can be avoided by using proper language, clear structure, and respectful tone in communication.

Task 5

While working on Task 5, I learned about phishing and how easily people can become victims of cybercrime. What surprised me the most was how attackers make fake messages look so real that it becomes difficult to identify them.

This task made me more aware of online risks and the importance of being careful while using digital platforms. One habit I will change is to always verify links and messages before clicking on them, especially when they involve personal or financial information.

Overall, this task helped me understand the importance of cyber awareness and how small precautions can prevent serious problems.

Conclusion

This project helped me understand different aspects of digital literacy, including online communication, professional presence, and cyber safety. Each task provided practical experience and improved my confidence in using digital tools.

I learned how to present information visually, build online profiles, use collaboration tools, and communicate professionally. Most importantly, I understood the importance of staying safe and responsible in the digital world.

Overall, this project was a valuable learning experience that will help me in my academic journey and future career.
